

Real Case Study

Each group pick a case and 2 imposed parameters:

-> a partner and a type of action

Discuss about the problematic and exchange ideas

Think about other partners, different aspects of your solution

Create your imposed prototype about a clear part of your project

1

Problematic :

-Food Waste
-Lack of botanic knowledge and outdoor time for children

Scholar context : Rural area, large outdoor space

2

Problematic :

- Non-nutritious diet
-Lack of knowledge about healthy/unhealthy food

Scholar context : Small school in a village trying to promote a healthy life in the community

3

Problematic :

-Lack of awareness about environmental problems
-No local discussions/collaborative work about that

Scholar context : An international school promoting an education in collaboration with families

How to answer these problematics in a concrete way

2 parameters will be imposed :

- One specific partnership
- One type of event/place/etc...

Warning: Be clear on the part of the project you want to prototype.

Other possible partnerships: Grocery stores, Restaurants, local Artist, municipality, families, university, public health institute, ecologic packaging designers, farmer, canteen, informatician society, nutritionists...any other you think about!

Questions to keep in mind

Which is the context?

What is needed in this project (by ourselves or by our partners)?

What could we learn from other users, products, services?

How can we make the future concrete?

How to create shared places to support our actions?

What is the difference between our solution and others?
